

Electric Rate Workshop
June 12, 2007

MidAmerican Energy Company held its first electric rate workshop on June 12, 2007 at the Ankeny campus of the Des Moines Area Community College. The workshops are held in compliance with the Iowa Utilities Board Order in Docket No. RPU-04-2 issued on June 19, 2006.

Thirteen people attended the workshop representing the Office of Consumer Advocate, industrial, commercial and residential customers. MidAmerican Energy Company had twelve employees in attendance.

The majority of the workshop was a presentation by MidAmerican Energy Company on cost-of-service including various alternative methodologies and resulting illustrative rates. Company representatives responded to questions related to cost-of-service. The workshop also included a brief background on the regulatory proceedings and Board order leading up to the workshops. Administrative issues such as the dates for future workshops and the process for non-company presentations were discussed. Presentations by workshop participants are welcomed.

The next workshop will be held on July 24 at the Ankeny campus of the Des Moines Area Community College beginning at 10 A.M. The subject of the workshop will be residential rate design.
