Applicable to All Rates

RIDER NO. 4 DETERMINATION OF GAS DELIVERED IN THERMS

The quantity of gas delivered and billed shall be expressed in therms.

The number of therms delivered and billed in any month shall be determined by multiplying the volume of gas in cubic feet by the average total heating value of the gas, expressed in Btu per cubic foot, as applicable for such month, and dividing this product by 100,000.

* The average total heating value of the gas delivered here-under in any month shall be the average total heating value applicable to the natural gas purchased, transported, and produced by the Company during the month occurring two months prior to the current billing period. Any fraction of one Btu per cubic foot in average heating value so determined shall be dropped if less than 0.5 Btu or, if 0.5 Btu or more, shall be rounded up to the next full one Btu.

For customers using large volumes, the volume of gas in cubic feet referred to herein shall be that measured volume determined from the reading of the Company's meter or meters at metered temperature and pressure corrected to sixty degrees Fahrenheit and fourteen and seventy-three hundredths (14.73) pounds per square inch.

Issued: December 14, 2000

Effective February 1, 2001

Asterisk (*) indicates change.
