

A MESSAGE FOR PIPELINE COMPANY NEIGHBORS

Did you know that America's energy transportation system includes over 2.3 million miles of pipeline? Pipelines range in size from 60 inches used for the cross-country transportation of energy to the half-inch pipeline that delivers natural gas to our homes. These pipelines carry the petroleum we use in our cars and the natural gas we use to cook our meals and heat our homes. In fact, pipelines account for the delivery of about two-thirds of our petroleum products and virtually all of our natural gas.

While most pipelines are buried below the ground, the facilities used to support them operate above ground. Because of their importance to America's economy and our everyday life, pipelines, pumps, compressors, valves and other equipment that makes these systems work, are a potential target for vandals and those who want to do harm to the public or property. Therefore, the security of the nation's pipeline networks is something we all have a stake in. One of the ways you can help is by participating in the pipeline security "neighborhood watch."

If you smell gas or hear blowing gas, leave the premises immediately, without touching anything that could spark. Call MidAmerican toll free at 800-595-5325 from another location.

Do not re-enter the area until you have been advised that it is safe.

The Transportation Security Administration (TSA) has prepared this pamphlet as part of a cooperative effort with your neighboring pipeline company to maintain the security of this vital network. You can play a major role in this effort. If you observe something unusual or out of the ordinary near a pipeline facility, call the pipeline company contact provided in this pamphlet. **Of course, in the event of an emergency or immediate threat, you should always call 911.**
