CARING FOR OUR COMMUNITIES

Through CARES, our corporate citizenship program, we give our time, talent and resources to give back to our local communities. In 2022, our employees volunteered a record 11,000 hours at more than 300 events. And, we have a company-wide goal to reach 12,000 hours in 2023! We are well on our way after volunteering with the Iowa Heartlanders at their Education Game, Habitat for Humanity at house builds around our service territory, the City of Windsor Heights at their Touch-a-Truck event and so much more.

We are also honored to be able to provide financial support to many organizations and community initiatives across our service territory, based around our pillars of Community Enhancement, Environmental Respect, Education/STEM, Arts/Culture and Safety/Wellness. So far this year, some of our financial giving from each pillar has included:

- ▶ \$250,000 to Friends of MLK to help build the new MLK Park in Davenport, Iowa
- ▶ \$25,000 to Iowa Central Community College for their auditorium renovation project
- ▶ \$15,000 to iJAG Inc. in support of their education programming
- ▶ \$4,500 to the Iowa Urban Tree Council
- ▶ \$4,000 to Can Play in support of their adapted and no-cost recreational programs

Do you know of an event, festival, donation drive or organization in your community that needs our volunteers or support? Visit **MidAmericanEnergy.com/CARES** to learn more about how we can help!

HAVING A **FIELD** **DAY**

In June, Big Sand Mound Nature Preserve – located south of Muscatine, Iowa, along the Mississippi River – opened to the public for a single day for the first time in four years. We are proud to have a hand in preserving this diverse ecosystem of plants and animals as part of our commitment to protecting the environment. See photos at MidAmericanEnergy.com.

THE **ART** OF THE **BLADE**

Did you ever imagine recycled turbine blades could be turned into functional art? One of our recycling partners, Canvus, is making it a reality! When it's time to replace worn, outdated blades with new, more efficient ones, Canvus works to combine the fiberglass from old wind turbine blades with other materials – also largely recycled – to create unique street furniture from public seating, to planters, to signage and more. To date, MidAmerican has sent Canvus more than 550 blades to be repurposed into thousands of products. Learn more about what we're doing to repurpose old blades at MidAmericanEnergy.com/environmental.
