A MIDAMERICAN ENERGY NEWSLETTER

**AUGUST 2026**

# HAVING A **FIELD DAY**

In June, Big Sand Mound Nature Preserve – located south of Muscatine, Iowa, along the Mississippi River – opened to the public for a single day for the first time in three years. We are proud to have a hand in preserving this diverse ecosystem of plants and animals as part of our commitment to the environment.

## SUMMER SAVINGS TIP:

# BECOME A FAN OF FANS

Fans use less energy than air conditioners and can help spread cool air throughout your home. Set your ceiling fan to turn counterclockwise to draw warm air upward and cool the room.

## Keep your HVAC system running smoothly

HVAC systems lose efficiency over time due to wear, dirt buildup and deferred maintenance. Use MidAmerican's Equipment Tune-Up program to save on tune-up costs!

Available for Iowa and Illinois customers. Learn more at **MidAmericanEnergy.com/tuneup** or call 877-932-0616.

## Protecting customers from data center costs

MidAmerican has served large facilities like data centers for over 20 years while keeping residential electric rates low – 44% below the national average. Data centers and other large-load customers pay for the infrastructure and generation required to serve them. These customers also commit to paying for 10 years of power, even if their usage fluctuates. If they leave early, they pay exit penalties. These protections ensure that families, farmers and small businesses never cover someone else's costs.

## Call before you dig – it's the law

Anytime you're digging or excavating, call 811 at least 48 hours (not including the day of the notice, weekends and holidays) before work begins. Professional locators will come out and mark underground electric and natural gas lines so you can do your digging without risking damage of facilities or serious injury. If you have privately owned underground lines – irrigation systems, invisible fences, lines to a detached shed or grill, etc. – contact a qualified private contractor to have those lines located.
