

LOW PRICES • STABLE RATES • RELIABLE SERVICE

MidAmerican Energy is committed to doing our part to maintain some of the lowest and most stable electric rates in the country.

RATES WELL BELOW THE NATIONAL AVERAGE

For **more than 20 years**, MidAmerican has kept electric rates low – Iowa's rates are **44% lower than the national average**. During that time, we have successfully served large industrial customers, including data centers. In fact, these large customers play a role in keeping rates low and predictable.

Thanks to Iowa's innovative regulatory mechanisms, including revenue sharing, **more than \$1.5 billion has been shared with customers since 1997**, reinforcing MidAmerican's long-standing commitment to affordability.

DATA CENTERS PAYING THEIR FAIR SHARE

Large industrial customers, including data centers, are required to **fund the infrastructure needed to serve them**, such as substations and transmission upgrades. These costs are **not passed on to existing customers**.

In addition, MidAmerican has strengthened customer protections through new requirements like **minimum load commitments** and **exit penalties**. These ensure large customers pay for the generation we build to serve them, even if they don't add as much load as expected or end their operations sooner than expected. MidAmerican stands ready to make sure other customers – including **families, farmers and small businesses** – **are not left holding the bag**.

SYSTEM BENEFITS FOR ALL CUSTOMERS

When large customers bring their steady electricity demand onto our system, it helps **spread fixed costs**, and that supports lower and more stable rates for everyone. The infrastructure needed to serve them strengthens the overall grid, creating a **more resilient and diversified system** that benefits everyone.

This is not a new or theoretical approach – it's a reality MidAmerican has successfully managed for more than two decades and one we are committed to continuing well into the future.

A BALANCED, RELIABLE ENERGY MIX

MidAmerican delivers electricity through an **all of the above energy portfolio**, combining zero-fuel-cost renewables like wind and solar with resources available 24/7, such as coal, natural gas and nuclear.

This diversified mix **keeps our system reliable and helps insulate customers from sudden price swings** caused by fuel cost spikes or extreme weather.

EXPERIENCE, DISCIPLINE AND CUSTOMER FOCUS

At MidAmerican, we have decades of experience delivering for our customers while welcoming new ones. We will continue to ensure your service is safe, reliable and low cost – because that's what it means to be **obsessively, relentlessly at your service**.
